

Plant lifecycles

Antillean Crested Hummingbirds

Every plant that lives on Montserrat goes through a lifecycle.

Each species of plant is unique, but most follow a similar set of stages in their lifecycles.

1. People eat Noni fruit, and use its leaves and roots in medicine. These birds also feed on Noni plants. Can you name them?

2. Animals who feed on Noni flower nectar may also spread its pollen. These animals are called pollinators. Can you name some of Noni's pollinators?

3. Animals who eat Noni seeds may spread them; this is called seed dispersal. Can you think of animals who spread Noni's seeds?

Plant lifecycles

Carefully cut out the pictures. Glue them in place to complete Noni's lifecycle!
